Subject: Request for Information on Delta Reclamation District
Surveys and Data Storage

Dear :

The Delta Protection Commission is very concerned about the long-term stability and viability of the Delta levees. The Commission has directed staff to research various issues related to the current status of Delta Primary Zone levees and data that could be used to study the volume of material and costs associated with raising the agricultural levees from the Hazard Mitigation Plan standards to the PL-99 or Bulletin 192-82 standards.

To understand the type, age, and accessibility of the information that has been developed by the Reclamation Districts' engineering consultants, I am requesting your assistance. Please submit the following information to the Delta Protection Commission:

- * The Reclamation Districts that are your clients.
- * The date of the latest elevational survey of each client Reclamation District.
- * The date of the latest cross-sections that have been prepared and distance between cross-sections.
- * If any estimates been prepared about the volume of various materials needed to raise levees to PL-99 or 192-82 standards, and if yes, to what standard.
- * How data is stored (i.e. on paper, on a CAD system, other computer storage).

Once the Commission reviews the type of data that has been prepared by the Reclamation Districts, the Commission will determine if it is feasible to proceed with a second step which would be development of actual estimates for a limited number of islands.

Your assistance in this matter is appreciated greatly. Please do not hesitate to contact me if you have questions about the request for information.

Sincerely,

A handwritten signature in black ink, appearing to read "Margit Aramburu", with a long horizontal flourish extending to the right.

Margit Aramburu
Executive Director
